SUMMARY

Full-stack developer and technical operations leader specializing in AI-augmented solo development, shipping team-scale platforms through disciplined human-in-the-loop workflows. Delivered an enterprise-scale internal platform for a multi-venue hospitality operation at an estimated \$900K-\$1.35M in labor savings versus a traditional team build. Independently designed and shipped a secure communications platform for community organizing from concept to active pilot in two months. Two decades of frontline hospitality and operations experience ground the technical work in deep operational empathy.

TECHNICAL SKILLS

Languages & Frameworks: PHP, Python, JavaScript, TypeScript, Laravel, React, Node.js, Livewire, HTML/CSS, MySQL

Systems & Tools: REST API integration, database design, systems architecture, multi-tenant platforms, Azure cloud deployment and optimization, Git

AI-Augmented Workflows: Claude Code for spec-driven prompting, iterative code review, test-guided generation, and architectural decision ownership; production-proven solo delivery at team scale through disciplined human-centric practices

Integrations: Toast POS, Easol, Embed, Signal protocol, Viator

Additional: Adobe Creative Suite, Microsoft Office, process automation, data reconciliation

PROFESSIONAL EXPERIENCE

INDEPENDENT PROJECTS

2021 - PRESENT

ALEXANDRIA - CREATOR AND SOLE DEVELOPER

2021 - PRESENT

Creator and sole developer of Alexandria, an EAV-structured worldbuilding and creative structuring platform designed to solve a UX problem no existing tool addresses: how writers and creators capture unstructured ideas as they arrive and progressively organize them as the underlying world takes shape. Currently in active use as a working prototype.

- Architected the platform on an entity-attribute-value (EAV) model, allowing users to define their own entity schemas and attributes rather than conforming to a fixed template, enabling the same core system to serve fundamentally different creative projects without customization
- Built an LLM integration layer that reads each user's custom schema dynamically and generates content conforming to their specific world structure rather than producing generic output
- Migrated the platform from Livewire to React to take advantage of the broader frontend ecosystem, gaining direct experience with modern React patterns on a production-scale personal codebase
- Designed the core functionality around a generalized capture-first workflow, so the system adapts to the user's evolving understanding of their own material rather than forcing upfront structural commitments

SIGNAL ACCESS MANAGER - CREATOR AND SOLE DEVELOPER

JAN 2026 - PRESENT

Designed and shipped a secure communications platform built on Signal's open-source infrastructure for community organizing and rapid response networks. Took the project from concept to initial pilot in two months.

- Designed a multi-layer authentication and handshake protocol with certificate-based verification, color-coded status signals, and coded vocabulary trees for secure onboarding
- Built ZIP code adjacency alerting for geo-aware coordination across community networks
- Implemented decoy and silent emergency modes for high-risk operational scenarios
- Architected the broader Myco Network framework: a federated four-tier communications model (Signal onramp, community-hosted servers, self-hosted, Meshtastic mesh networking) with cryptographic trust scoring

SWINGERS: CRAZY GOLF CLUB**NEW YORK, NY****MAR 2022 – APR 2026****LEAD PLATFORM DEVELOPER****MAY 2025 – APR 2026**

*Sole developer of the **Swingers Hub**, a full-stack internal platform replacing fragmented Excel-based operations across multiple hospitality venues. Designed, architected and shipped the entire system using disciplined AI-augmented workflows.*

- Delivered Phase 1 at an estimated \$900K–\$1.35M in labor savings over 8 months, compared to a traditional 4–6 person development team over 12–18 months
- Architected and deployed a Laravel/Livewire platform on Azure with 106 database tables, 211 routes, and 61 reusable service classes, integrating Toast, Easol, Embed, and Viator APIs for real-time operational data
- Shipped 53 production releases and 1,100+ commits as a solo developer, sustaining aggressive release cadence through rigorous AI-assisted review, testing, and refactoring practices
- Reduced nightly cash reconciliation by 20–30 minutes per venue and cut discrepancy research from 30–60 minutes to under 5 minutes by replacing manual Excel workflows with automated, API-driven pipelines
- Optimized Azure deployment architecture across staging and production environments, separating queue and notification logic into independent deployments to maintain reliability on a cost-efficient resource tier
- Designed scalable multi-venue architecture that onboarded a new location with zero additional custom development, validating the platform's franchising readiness

APPLICATION SUPPORT ANALYST / RECEPTION CAPTAIN**MAR 2022 – MAY 2025**

Managed operational systems and data workflows across venues, bridging hospitality operations with technical infrastructure. Identified systemic improvement opportunities that led to the Hub platform.

- Automated processors for operational data extraction, reducing hourly processing time from 12 minutes to 30 seconds
- Led first systemic improvements to Toast POS configuration, standardizing workflows and reducing errors across venues
- Rebuilt the Golf Diary system to support quicker updates for stakeholders while preserving existing operational processes
- Made the business case for a central internal platform during the Easol onboarding, leading to the Hub initiative

SODEXO USA**FLUSHING, NY****JUL 2021 – DEC 2021****ASSISTANT MANAGER OF GUEST SERVICES**

- Founded the 8 West Concierge Program for VIP clientele and launched the Lobby Concierge Program, consolidating multiple service functions under a single department during a hiring freeze

JETBLUE AIRWAYS**LONG ISLAND CITY, NY****OCT 2014 – JUN 2021****INFLIGHT CREWMEMBER**

- Served as departmental safety champion for two years, representing inflight on enterprise-wide safety committees and building feedback channels during major operational changes

WALT DISNEY WORLD RESORT**ORLANDO, FL****MAY 2007 – JUN 2014****WILD AFRICA TREK COORDINATOR, PAYROLL PROCESS ANALYST, GUEST RELATIONS TRAINER**

- Established the Coordinator Help Desk at Disney's Animal Kingdom, the central call center for guest impacts and resolutions, saving over 25,000 labor hours annually through optimized rotations and performance metrics
- Developed a project management system for Disney Worldwide Shared Services that improved tracking and clarified objectives across team members, leaders, and stakeholders

EDUCATION

Northwood University	Midland, MI	2005 – 2008	B.S. Business Administration
Delta College	Bay City, MI	2005 – 2008	Associate in Business Studies
